

15mm

- 1** Multiple "PIPE RETENTION CLIPS" to secure the pipe in place
- 2** "PURPOSE DESIGNED SUPPORTS" to provide a structural key for tile adhesive and low profile screeds
- 3** 'SNAP CLIPS' to fasten the panels together

- 4** Multiple "BREAK POINTS" with V shaped notches to aid cutting knife alignment
- 5** Optional 'HIGH COMPRESSIVE STRENGTH INSULATION LAYER' pre-bonded to each panel
- 6** "SLIDE AND LOCK FEATURE" to connect the panels together
- 7** "ULTRA LOW PROFILE" for either a 10mm or a 12mm pipe

For a 3mm covering of levelling compound on top of the Profix Panel you will require 25kg of self levelling compound for every 0.9m<sup>2</sup> area. Meaning that for a 10m<sup>2</sup> area you will need 277kg which equals 12 bags @ 25kgs.

Area divided by **0.9** = number of **25kg** bags you will need. If using **20kg** bags divide the area by **0.72** to calculate how many bags you will require.
